Processes are the paths of decision making – some are simple, others complex, and hundreds weave through your business every day. They set the pace of your operations. Managing the flow of work, and information, along these process paths determines the speed, agility, and quality of decision making. That is why streamlining and optimizing these processes determines the success of your organization.

Summary

PageProcessor BPMManager is a powerful Business Process Management (BPM) solution that enables organizations to react quickly to changing market requirements, competitive challenges, and customer demand.

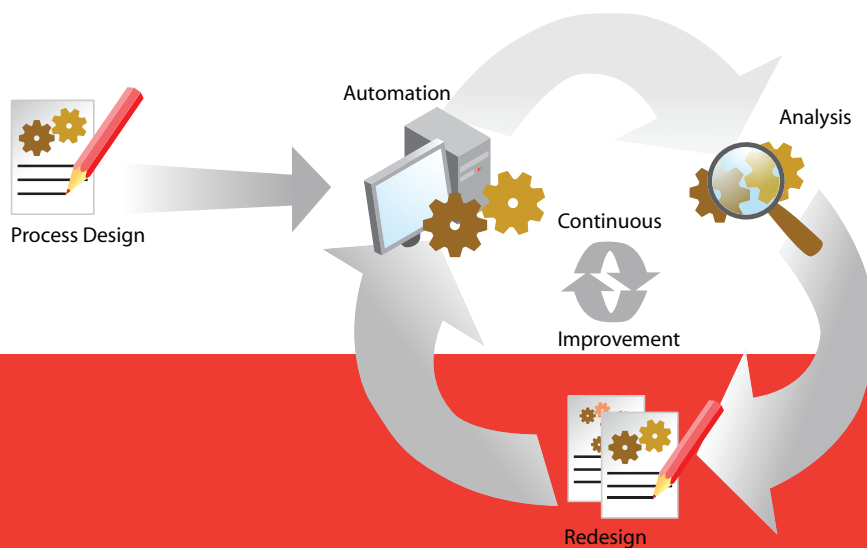

In today's fast moving marketplaces, it is vital that organizations assess their performance not merely periodically, but as a continuous ongoing activity, allowing process modifications to be made without interrupting the processing of work. The PageProcessor BPMManager provides a robust framework to automate, integrate and optimize business processes to speed critical business decision-making, increase organizational responsiveness and efficiency and lower the overall cost of doing business.

Business Process Manager

Processes involve people, business systems, and content. Only when they work together in an automated environment can maximum productivity and value be realized. Furthermore, optimized processes strengthen your ability to react quickly to changing market conditions and customer requests while ensuring regulatory compliance. Bottom line, better processes continuously improve and enhance the performance of your business to give you a competitive advantage.

Many challenges need to be overcome before these objectives can be met. Many existing processes are still done manually, making them difficult to integrate and standardize. They are not easy to modify when conditions change. In addition, a large number of complex processes rely on content from disconnected systems that cannot share information. All of this limits productivity, slows cycle and response times, hinders regulatory compliance, and makes it difficult to accurately account for how decisions are made.

Companies utilizing the right Business Process Management capabilities are conquering these challenges to gain a true competitive edge by automating, integrating and optimizing repetitive critical business processes at every level of their organization.

The Path to Better Decisions

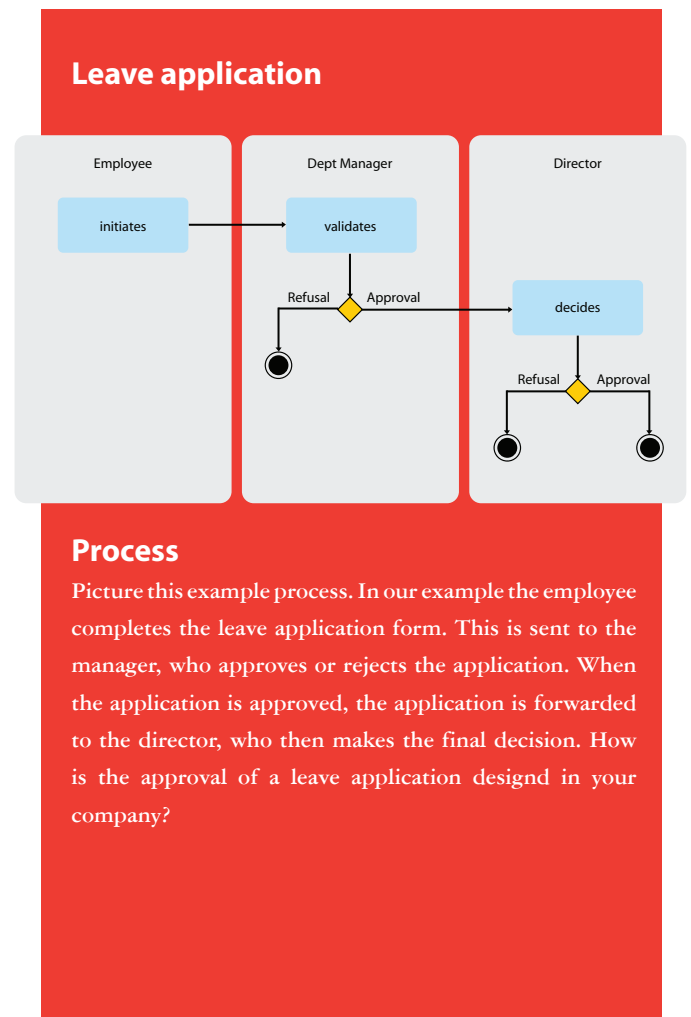

PageProcessor BPManager controls the flow of work throughout your business by streamlining, automating, and optimizing business processes. It has the flexibility and scalability to handle the most complex business processes – involving heterogeneous concurrent transactions, different kinds of users, and multiple business applications. BPManager helps shorten process lifecycles and automatically manages process exceptions so you can react immediately to internal events or customer demands.

These capabilities have delivered a significant return on investment for our customers including benefits such as:

- ➔ Improving productivity
- ➔ Reduction of operational costs
- ➔ Decreasing decision cycle time from days to just minutes
- ➔ Improved overview of automated processes
- ➔ Rapid setup of new process solutions with an intuitive as familiar user interface which eliminates the need to train users
- ➔ Reducing Human Resources costs by providing employees with automated services and self-serve resources
- ➔ Saving money by driving high-performance processes and optimized workflow throughout the organization.
- ➔ Separation of process concept and technical implementation, thus improving process management
- ➔ Enabling the integrated management of complex processes

A Platform for Tomorrow, Today

BPManager is based on the PageProcessor standards-based architecture, which offers enterprise-level scalability and flexibility to handle the most demanding content challenges, the most complex business processes, and integration to all your existing systems. The PageProcessor architecture provides a scalable framework for functional expansion to manage enterprise content and Web publishing challenges, and provide greater process control and consistency across your enterprise.

About Pagelink

Pagelink Interactives is recognised as a company dedicated to combine strong industry knowledge and world-class skills to help our customers build and maintain collaborative content and process management solutions.

The business environment has never been this competitive. Therefore business processes need to change continuously. Business process management and application integration is new territory for many companies, but at Pagelink it's what we do. For our innovative approach in developing and automating dynamic business processes, the existing processes, information flows and data sources serve as the main starting point. Pagelink offers tightly integrated solutions for proactive management of the continuously changing business environment. In order to guarantee high quality standards, Pagelink uses PRINCE II methodology for all its project management.

Building on its experiences, Pagelink in 1998 developed its flagship product, PageProcessor Server. All solutions are built on the PageProcessor Server infrastructure, facilitating the complete spectrum of Content and Process Management. PageProcessor Server helps companies integrate new and existing IT systems into a cohesive business process flow that speed response times, improves efficiency and reduces operational costs. As it comes to Content Management, PageProcessor's user friendly browser based WYSIWYG Editor provides a great deal of flexibility in situations where you want your authors to have advanced formatting capabilities.
